POST 0/16 — INTRO — Series Opening

A sorozat nyitóposztja

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

8 months of "preparing for AI Act compliance." Zero AI shipped. Here's what went wrong — and a 16-post series to fix it.

Eight months ago, a Head of AI Strategy at a 300-person professional services company told me they were "getting ready for EU AI Act compliance." Three AI tools were in development. All three were on hold.

Last month, I asked how things were going.

Two tools were still on hold. The third had been quietly shelved. The compliance programme was still "in progress."

Here's what had happened: the organisation had started with the wrong question. Not "what is this AI tool doing, for whom, and what happens if it's wrong?" — but "are we compliant?"

That question has no clean answer before you've defined the use case. So the project circled. Reviewed. Escalated. Circled again.

This series is built around one observation: almost every AI Act failure I've seen — not legal failure, operational failure — starts with the same wrong first move.

Over 16 posts, I'll cover:— Why the first meeting usually goes wrong (Week 1)— Why the existing solutions don't fit most organisations (Week 2)— How routing actually works — the 12 questions, the scoring, the three tiers (Week 3)— What a complete, immediately actionable output actually looks like (Week 4)

Not legal advice. Not certification. Not an audit. Decision support — the kind that lets AI projects actually ship.

Follow along if this is relevant to your org. And if you're already in the middle of this — drop a comment. I'm genuinely curious where you're stuck.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#AIGovernance](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

Opening post of the AI Act Readiness Series — 16 posts, one through-line: the first question your organisation asks about AI Act compliance determines whether the project ships or stalls.

Which of the four weeks above is most relevant to where you are right now?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "8 Months of AI Act Prep. Zero AI Shipped."

S1: 8 months of AI Act prep. Zero AI shipped. / Here's what went wrong — and how to fix it.

S2: The story: Head of AI Strategy. 300-person firm. Three AI tools on hold. 8 months later: two still waiting, one shelved.

S3: The wrong first question: "Are we compliant?" / The right first question: "What is this AI doing, for whom, and what happens if it's wrong?"

S4: Without the right first question, the project has no anchor — so it circles, escalates, and stalls.

S5: The fix: a structured routing step — 12 questions, a score, a classification — before the compliance conversation starts.

S6: Three tiers. Proportional responses. The routing step takes minutes. The compliance work becomes manageable.

S7: 16 posts. One through-line. Follow the series to go from "preparing" to shipped.

POST 1/16 — THE PROBLEM — The meeting that cost three months

Hétfő | 1. hét: THE PROBLEM

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

Laura walked into the meeting to approve a pilot. She walked out with a compliance task list and a three-month delay. The pilot never changed. The meeting did.

Laura is VP of Operations at a mid-sized logistics company. She'd been building an AI tool to help her dispatch team prioritise routes — nothing exotic, no sensitive data, no automated decisions. A human dispatcher reviewed every output before acting.

She booked a 30-minute steering meeting to get sign-off and move to pilot.

Ninety minutes later, she walked out with no sign-off and a new action list: legal review, DPIA scoping, "high-risk assessment," and a follow-up meeting in three weeks.

Nobody in that room was wrong. Legal was doing its job. The risk team was being responsible. Leadership wanted certainty before approving.

But nobody had asked the four questions that would have resolved everything in ten minutes:

What is the AI actually doing? (Ranking routes for a human dispatcher to review.) Does it make decisions or support them? (Support — the human decides.) Who is affected and how? (Internal team, no external impact.) What happens if it's wrong? (A dispatcher re-routes — recoverable, low-stakes.)

Without those answers, the meeting had no anchor. So it escalated.

This is how the EU AI Act costs organisations months — not through the law itself, but through the absence of a routing step before the compliance conversation starts.

The fix takes about twelve questions and produces a score. From the score, you route: Transparency, PreCheck, or HRAI. Proportional to the actual risk — not the imagined worst case.

Not legal advice. Not audit. Decision support.

First time here? This is post 1 of 16 in the AI Act Readiness Series — 4 weeks on why AI Act projects fail, why the market doesn't serve most organisations, how routing works, and what an actionable compliance output actually looks like.

Save this post if Laura's meeting sounds familiar. I'll be covering exactly what those twelve questions look like — and what the routing produces — later in this series.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#RiskBasedApproach](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

1/16 — The AI Act doesn't stall projects. The missing routing step does.

Who owns the first clarity moment in your org when an AI project hits compliance questions — IT, Product, Legal, or someone else?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "The Meeting That Cost Laura 3 Months"

S1: Laura walked in to approve a pilot. She walked out with a 3-month delay. / The pilot never changed. The meeting did.

S2: What Laura's AI tool actually did: / Ranked routes for a human dispatcher. Human decided. No sensitive data. No automated decisions.

S3: The meeting that changed everything: / 30 minutes became 90. Sign-off became a task list. Legal review. DPIA scope. High-risk assessment.

S4: Nobody in the room was wrong. But nobody had asked the four questions that would have resolved it in ten minutes.

S5: The four questions: What is it doing? Does it decide or support? Who is affected? What happens if it's wrong?

S6: Laura's answers: Route-ranking support tool. Human decides. Internal only. Recoverable, low-stakes.

S7: The routing result: Transparency tier. Two weeks of work. The pilot shipped.

POST 2/16 — THE PROBLEM — One email, three weeks, €12,000

Kedd | 1. hét: THE PROBLEM

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

One email to Legal cost this team three weeks. The AI wasn't even high-risk. Here's what happened.

Marcus is Head of Product at a fintech scale-up. His team was shipping fast. One sprint, they added an AI feature — a model that flagged unusual account activity for a human compliance officer to review. The human reviewed every flag. No automated action. No customer-facing decision.

Before pushing to production, Marcus sent one line to Legal: "Heads up — we're shipping an AI feature next sprint. Worth flagging for AI Act purposes."

Responsible. Reasonable. The kind of thing you're supposed to do.

Three weeks later, the sprint was still on hold. Legal had escalated to external advisers. External advisers had scoped a full EU AI Act high-risk assessment. The assessment would take four to six weeks and cost €12,000.

When Marcus finally got on a call to review the situation, the classification took about fifteen minutes.

The model flagged anomalies. A human reviewed every flag. No automated decisions. No direct customer impact. No Annex III trigger. Score: 14/60. Route: Transparency — baseline disclosure obligations, manageable internally.

The €12,000 assessment was never needed. The three-week hold wasn't either.

The problem wasn't that Legal was wrong. It was that "high-risk" became the assumed starting label — not the output of a structured assessment.

In EU AI Act terms, high-risk classification requires intended purpose, decision impact, affected persons, oversight model, and Annex III signal review. Without those inputs, classification is a guess. And organisations are very conservative when they're guessing.

New here? I'm running a 16-post series on EU AI Act compliance — what goes wrong, what the market gets wrong, and how routing-based decision support actually works. Week 3 covers the methodology and the scoring.

Tag someone in your org who's about to send that "heads up" email to Legal — before they find out what it triggers. Or drop a comment: has this happened in your team?

[#AIAct](#) [#EUAIAct](#) [#HighRiskAI](#) [#AnnexIII](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

2/16 — "High-risk" should be an output of assessment — not the default input when AI is mentioned.

What triggers escalation in your org: the word "AI," the actual risk signals, or something else?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "One Email. Three Weeks. €12,000. It Wasn't Even High-Risk."

S1: One email to Legal. Three weeks on hold. €12,000 scoped. The AI wasn't high-risk. / Here's what happened.

S2: Marcus's email: / "Heads up — shipping an AI feature next sprint. Worth flagging for AI Act purposes."

S3: What the AI actually did: / Flagged unusual account activity for a human compliance officer. Human reviewed every flag. No automated action.

S4: What Legal assumed: / High-risk classification → external advisers → full assessment → 4–6 weeks → €12,000.

S5: What a structured assessment found: / Score 14/60. Route: Transparency. Baseline disclosure obligations. Manageable internally.

S6: The root cause: "High-risk" was the assumed starting label — not the output of structured assessment.

S7: The routing step takes minutes and produces a score. That score prevents a €12,000 misclassification.

POST 3/16 — THE PROBLEM — Two traps: freeze vs. over-compliance

Szerda | 1. hét: THE PROBLEM

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

Two companies. Same AI Act problem. One froze. One over-complied. Both lost six months. Neither had to.

In the same week last autumn, I spoke with two different organisations facing the same situation: an AI tool approaching production, an upcoming EU AI Act deadline, and no clear path forward.

Company A froze. Their legal team said "we can't clear this until we know the risk classification." Their product team said "we can't classify it until Legal tells us what to look for." The project sat in that loop for six months.

Company B over-complied. A well-meaning Head of Compliance launched a full governance programme — external advisers, documentation sprints, weekly steering committees. Three months in, the AI tool's scope had been reduced three times to avoid anticipated obligations. The programme cost more than the AI project itself.

What both companies were missing was the same thing: a routing step that could answer, within a structured 12-question assessment, where the use case actually sat on the risk spectrum.

Company A's AI tool scored 9/60 — Transparency route. No freeze needed. Company B's AI tool scored 31/60 — PreCheck route. Targeted clarification, not a full governance programme.

Neither needed what they did. Both needed what they didn't have: a proportional starting point derived from actual signals, not from assumption.

That's what the EU AI Act's risk-based approach is designed to produce. Proportionality isn't a loophole — it's the design principle.

Both traps — freeze and over-compliance — have the same fix: a routing step that takes 3 minutes and costs a fraction of what either trap does. I'll cover exactly what that looks like in Week 3.

New here? This is post 3 of 16 in the AI Act Readiness Series. Which of these two traps is more common in your experience — the freeze or the over-compliance spiral? Drop it in the comments.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#RiskBasedApproach](#) [#AIGovernance](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

3/16 — Both "freeze" and "over-comply" are expensive. The fix is the same for both: a routing step before the compliance conversation starts.

Freeze or over-compliance — which is more common in your org?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "Two Companies. Same Problem. Both Lost 6 Months."

S1: Two companies. Same AI Act problem. One froze. One over-complied. Both lost 6 months. / Neither had to.

S2: Company A — the freeze: / Legal: "Can't clear without risk classification." / Product: "Can't classify until Legal guides us." / Result: 6 months, nothing shipped.

S3: Company B — the over-compliance spiral: / Full governance programme. External advisers. Weekly steering. Scope reduced 3 times. Cost more than the AI project.

S4: Both were missing the same thing: a routing step that placed the use case proportionally on the risk spectrum.

S5: Company A scored 9/60 — Transparency. No freeze needed. Company B scored 31/60 — PreCheck. Targeted, not exhaustive.

S6: Proportionality is not a loophole — it's the EU AI Act's core design principle.

S7: Three minutes to route. A fraction of the cost of either trap.

POST 4/16 — THE PROBLEM — "What do you need me to decide?"

Csütörtök | 1. hét: THE PROBLEM

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

She sat through a 45-minute compliance presentation. Then asked one question. The room went quiet.

The CEO of a 220-person manufacturing company had asked her compliance manager to present the AI Act readiness status. He'd prepared well — forty-five minutes of regulatory context, risk categories, control frameworks, reference legislation.

She listened. She asked one question at the end.

"So — what do you need me to decide?"

The room went quiet. Not because the question was unfair. Because the presentation hadn't been built to answer it.

There was no decision on the table. No options with trade-offs. No recommended next step with an owner and a deadline. No "if we proceed, here's what needs to happen; if we don't, here's the cost."

The presentation was correct. It just wasn't actionable. And at leadership level, correct and actionable are not the same thing.

This is where most EU AI Act compliance outputs fail. They're built for accuracy — regulatory references, risk descriptions, methodology notes. That's appropriate for a legal file. But a CEO doesn't run a legal file. She runs an organisation.

A decision-ready AI Act output answers three questions:

(1) Decision — approve, pause, redesign, or escalate — with a clear recommendation. (2) Delegation — who owns what, with a deliverable and a deadline. (3) Documentation — what evidence is needed, when it's needed, and who creates it.

When those three things are present, the CEO can act in ten minutes. Without them, she reschedules.

The answer to "what do you need me to decide?" is the output of a structured routing assessment. I built one. It takes 3 minutes and generates a 26-page decision-ready report. Full details in Week 3.

What's missing most often in the compliance outputs you've seen — a clear decision ask, named owners, or defined timelines?

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#DecisionSupport](#) [#AIGovernance](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

4/16 — Correct and actionable are not the same thing. Most compliance outputs nail the first and miss the second.

What's missing most often: the decision ask, the owners, or the timelines?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "45 Minutes. One Question. Silence."

S1: 45 minutes of compliance presentation. One question. Silence. / "So — what do you need me to decide?"

S2: The presentation covered: / Regulatory context. Risk categories. Control frameworks. Reference legislation. / What it didn't cover: the decision.

S3: What a CEO actually needs from compliance: / (1) A clear decision to make. / (2) Named owners for each action. / (3) Defined timelines.

S4: Correct and actionable are not the same thing. Most compliance outputs achieve the first and miss the second.

S5: When those three things are present — the CEO acts in 10 minutes. Without them — she reschedules.

S6: The answer to "what do you need me to decide?" is the output of a structured routing assessment.

S7: 3 minutes to complete. 26-page decision-ready report. Immediately delegable.

POST 5/16 — THE MARKET FAILS — €18,000, 47 pages, nobody knew what to do

Hétfő | 2. hét: THE MARKET FAILS

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

€18,000. Six weeks. A 47-page report. And on Monday morning, nobody knew what to do.

The General Counsel at a 400-person retail chain made what seemed like the right call. The EU AI Act was coming. They had three AI systems in production. She hired a respected specialist firm to run a full compliance review.

Six weeks and €18,000 later, she had a 47-page report.

It was thorough. Legally accurate. Well-referenced. The kind of document that would look excellent in an audit file.

She sent it to the CEO. He read the executive summary and replied with one question: "What should we do first?"

She sent it to the Head of IT. He replied: "Which parts are for us, and what specifically do we need to build?"

She sent it to the product team. They didn't reply.

The report had no decision section. No task assignments. No owner names. No timelines. No trigger logic. It described the compliance landscape precisely and said nothing about who should do what by when.

The €18,000 bought excellent analysis. It didn't buy operational clarity — and operational clarity is what moves a project.

Six months later, two of the three AI systems were still running without any of the recommended changes implemented. Not because anyone was negligent. Because the report told them what the situation was, not what to do about it.

This is the structural failure of the traditional compliance consulting model. The deliverable is a document. What organisations actually need is a decision, a delegation, and a documentation baseline — structured for three different audiences at once.

There is a third option between the €18,000 consulting report and the DIY spreadsheet. It's called the AI Compliance Engine — a 3-minute intake that produces a 26-page, automatically generated compliance report structured for the CEO, the operations team, and the legal adviser simultaneously.

Has your org received a compliance report that nobody knew how to action? Drop a comment. And if you're in this situation now — DM me "PRECHECK" for a sample of what an actionable output actually looks like.

[#AIAct](#) [#EUIAIAct](#) [#AICompliance](#) [#RegTech](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

5/16 — The consulting model produces excellent analysis. It rarely produces operational clarity. Those are not the same thing.

Have you received a compliance report that produced no clear action? What happened next?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "€18,000. 47 Pages. Nobody Knew What to Do on Monday."

S1: €18,000. 6 weeks. 47 pages. And on Monday morning — nobody knew what to do. / The traditional compliance model has a structural flaw.

S2: What the report was: / Thorough. Legally accurate. Well-referenced. Audit-ready.

S3: What the report lacked: / No decision section. No task assignments. No named owners. No timelines.

S4: Three audiences. Three questions the report couldn't answer: / CEO: "What should we do first?" / IT: "Which parts are for us?" / Product team: (silence)

S5: Six months later: two of three AI systems still running without the recommended changes. Not negligence. A design failure.

S6: The structural flaw: compliance consulting is built to describe the situation — not to activate the organisation.

S7: Three-audience report. Immediate delegation. Decision-ready output. The alternative to the 47-page filing.

POST 6/16 — THE MARKET FAILS — "That's for companies ten times our size"

Kedd | 2. hét: THE MARKET FAILS

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

The best AI compliance platforms cost €80,000 a year, require six months to implement, and need a dedicated IT team. They're built for companies that don't have your problem.

Sandra is CTO at a 180-person logistics tech company. Her team had built two AI tools in the past year, both approaching production. She needed to understand where they sat under the EU AI Act before going live.

A colleague recommended one of the major enterprise compliance platforms. She booked a demo.

The platform was impressive. Real-time monitoring, automated documentation pipelines, multi-system governance dashboards, regulatory update feeds. The sales engineer walked her through the implementation timeline: six months minimum, dedicated IT resource required, annual contract starting at €80,000.

Sandra thanked him, closed her laptop, and said to her Head of Product: "That's for companies ten times our size."

She was right. The enterprise AI compliance market is built for organisations with dedicated GRC teams, multi-year implementation budgets, and compliance functions that already have the infrastructure to absorb a six-month onboarding.

For a 180-person company that needs to understand its AI Act obligations before two tools go to production, that market doesn't exist.

The other end of the spectrum — a freelance consultant or a boutique legal firm — costs €8,000 to €50,000, takes six to ten weeks, and delivers the kind of report we covered in the last post: legally thorough, operationally silent.

Between those two options, there is an empty gap. The gap where most SMEs and mid-market organisations actually live: they know they need to do something, they have a real deadline, and nothing on the market is sized for them.

The gap Sandra identified now has a product in it.

The AI Compliance Engine sits exactly between those two broken options. It's a productised expert service — a 12-question intake that generates a personalised 26-page compliance report automatically. No implementation project. No GRC team required. No six-month timeline.

I built it for organisations like Sandra's. Full methodology in Week 3 — or DM "PRECHECK" to see a sample report now.

Save this post if your org is in the gap Sandra described. DM me "PRECHECK" for a sample report — see what the middle option actually looks like.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#SMECompliance](#) [#RegTech](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

6/16 — The AI compliance market has two ends and an empty middle. Most organisations live in the middle.

Where does your organisation sit: more like the 180-person company, or do you have an enterprise GRC team in place?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "The AI Compliance Market Has a Gap. You're Probably In It."

S1: The best AI compliance platforms cost €80K/year, need 6 months, and require a dedicated IT team. / They're built for companies that don't have your problem.

S2: Sandra's demo: / 180-person company. Two AI tools approaching production. Real AI Act deadline.

S3: Enterprise option: / €80K/year. 6-month implementation. Dedicated IT required. "That's for companies ten times our size."

S4: Consulting option: / €8K–€50K. 6–10 weeks. Legally thorough. Operationally silent.

S5: The gap: / SMEs and mid-market orgs that need clarity before go-live. Nothing sized for them.

S6: What belongs in the gap: / 12-question intake. Automated personalised report. No implementation project. No GRC team.

S7: The gap now has a product in it. Built for organisations like Sandra's.

POST 7/16 — THE MARKET FAILS — "Which part should I action?"

Szerda | 2. hét: THE MARKET FAILS

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

He spent six weeks building the most thorough AI governance documentation his company had ever produced. On the day he presented it, someone asked: "Which part should I action?" He didn't have an answer.

Daniel is a Compliance Manager at a 250-person professional services firm. He is thorough. Methodical. The kind of person who cross-references primary legislation with supervisory guidelines before drafting a single sentence.

When his company needed to address EU AI Act requirements for two internal AI tools, he did what thorough people do: he built the most complete governance documentation his organisation had ever produced. Six weeks. Sixty-one pages. Impeccable.

On the day he presented it to the steering committee, the Head of Product raised her hand.

"Which part should I action?"

Daniel paused. The document covered everything the AI tools needed to have documented. But it had been built as a compliance artefact — for an audit, for a regulator, for a legal file.

It hadn't been built as a management tool — for a Head of Product who needed to know what to build, for a CEO who needed to make a decision, for a lawyer who needed specific references.

The problem wasn't the quality of Daniel's work. The problem was the single-audience design. A compliance document built for legal completeness serves the legal file. It does not serve the three other audiences who need to act on it.

A functioning AI governance output needs three things simultaneously:→ An executive section built for decision-making→ An operational section built for task assignment→ A legal background built for the file and for counsel

These three sections are not the same document written three times. They are three different outputs, written for three different readers, derived from the same underlying assessment.

The AI Compliance Engine report is built exactly this way — three discrete sections, each written for a different reader: an executive package for the decision-maker, an operational section with assigned tasks and deadlines, a legal appendix with regulatory references and risk methodology.

Full methodology in Week 3 — or DM "PRECHECK" and I'll send a sample report so you can see all three sections side by side.

When you produce compliance outputs, which audience gets the most attention — leadership, operations, or legal?

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#AIGovernance](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

7/16 — Compliance thoroughness and compliance usability are not the same thing. Both matter. Most outputs achieve only one.

Which audience gets the least attention in the compliance documents your team produces?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "61 Pages. Nobody Knew Which Part to Action."

S1: 61 pages. 6 weeks of work. The most thorough governance doc the company had ever seen. / "Which part should I action?" — nobody had an answer.

S2: What the document covered: / GDPR intersections. Annex III analysis. Control frameworks. Full legal references. Sixty-one pages.

S3: What the document missed: / The CEO's decision. The product team's tasks. The lawyer's specific references. — Because it was written for one audience.

S4: The single-audience problem: / A document built for the legal file doesn't serve the CEO, the ops team, or the lawyer simultaneously.

S5: Three audiences. Three needs: / CEO — make a decision. / Operations — know what to build. / Legal — find the references.

S6: The solution: three sections derived from one assessment — each written for a different reader.

S7: Executive package. Operational task list. Legal appendix. Same 26 pages. Three different workflows activated.

POST 8/16 — SOFT PRODUCT REVEAL — I built what didn't exist

Csütörtök | 2. hét: SOFT PRODUCT REVEAL

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

For 18 months, I looked for a fast, affordable, immediately actionable AI Act compliance assessment. It didn't exist. So I built it.

If this is the first post of mine you're reading: I run a 16-post AI Act Readiness Series. This is post 8 — the point where the series shifts from problem to solution.

When I started working on EU AI Act compliance support for SMEs and mid-market organisations, I kept running into the same problem from the client side.

They knew they needed to do something. The deadline was real. The obligation was real. But the options were:

OPTION A — Consulting firm: €8,000–50,000, six to ten weeks, a document built for legal accuracy and not for operational action.

OPTION B — Enterprise platform: €15,000–120,000 per year, six-month implementation, requires a GRC team that most organisations under 500 people don't have.

OPTION C — DIY: A spreadsheet, some LinkedIn research, and a lot of uncertainty about whether you've covered what you actually need to cover.

None of these options work for a 200-person company with a real compliance deadline, a Head of IT who has two weeks to make a decision, and a budget that doesn't include a multi-month consulting engagement.

So I asked a different question: what if the expert service could be productised? What if the 12-question routing intake, the risk scoring, the Annex III pre-screening, and the three-audience report could be automated — and delivered in minutes instead of weeks?

That question became the AI Compliance Engine.

Three minutes to complete the intake. A score from 0 to 60. A routing classification — Transparency, PreCheck, or HRAI. And a 26-page, personalised compliance report — automatically generated, immediately delegable, built for three audiences at once.

I'll be walking through exactly how it works — the 12 questions, the scoring logic, the report structure — over the next four posts.

Not legal advice. A productised expert service — built for organisations the market forgot to serve.

DM me "PRECHECK" and I'll send you a sample report so you can see exactly what the output looks like before Week 3 starts.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#RegTech](#) [#SMECompliance](#)

ELSŐ KOMMENT — a poszt közzététele után töltsse fel külön

8/16 — The gap between affordable and €50,000 in AI Act compliance was empty for 18 months. The AI Compliance Engine fills it.

What's the biggest barrier in your org to getting AI Act clarity — time, cost, or knowing where to start?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "I Looked for a Fast AI Act Assessment for 18 Months. It Didn't Exist."

S1: I looked for a fast, affordable, actionable AI Act assessment for 18 months. It didn't exist. So I built it.

S2: The three options that existed: / A: Consulting — €8K–50K, 6–10 weeks, legally thorough, operationally silent. / B: Enterprise platform — €15K–120K/year, 6-month implementation, GRC team required. / C: DIY — a spreadsheet and uncertainty.

S3: None of these work for a 200-person company with a real deadline and a 2-week decision window.

S4: The question I asked: What if the expert service could be productised? What if it could be automated and delivered in minutes?

S5: The result: AI Compliance Engine. 12-question intake. Score 0–60. Three tiers. 26-page personalised report.

S6: Three audiences at once: CEO decision pack. Operational task list. Legal appendix.

S7: Built for organisations the market forgot to serve. DM "PRECHECK" for a sample.

POST 9/16 — THE METHODOLOGY — What 12 questions actually measure

Hétfő | 3. hét: THE METHODOLOGY

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

"You keep saying '12 questions' like that's meaningful. What are they actually measuring?" A fair challenge. Here's the honest answer.

An operations director pushed back on me during a conversation last month. He'd seen a lot of compliance checklists. Most of them, he said, were just boxes.

He was right about most checklists. The AI Compliance Engine intake is different.

The 12 dimensions aren't measuring whether you have documents. They're measuring signal density — how many indicators of genuine compliance risk are present in your specific use case.

Here's what each dimension covers:

Personal data processing — does the AI touch personal data? If yes, the GDPR intersection opens immediately.

Special category data — is there health, biometric, or financial data in the input or output? This is a critical flag.

Automated decision-making — does the AI make decisions, or does a human make decisions informed by the AI? This distinction drives the Annex III analysis.

Impact on user rights — can the AI's output affect someone's access to services, employment, education, or financial products?

Life-situation decisions — does the output affect someone's material circumstances in a direct, individual way?

Error consequences — what happens when the model is wrong? Low-stakes or high-stakes?

Human oversight need — is there a defined human review point, or does output flow directly into action?

Data quality dependency — does the system's reliability depend critically on input data quality that may vary?

Continuous monitoring need — does the system's risk profile change over time in ways that require active tracking?

Behaviour influence — does the AI influence user decisions in ways that create accountability?

Logging and auditability — can the system's decisions and outputs be reconstructed and reviewed?

Regulatory and compliance risk — are there sector-specific obligations (financial services, healthcare, justice) that add to the baseline?

Each dimension is scored. The combination produces a 0–60 total. The total — combined with critical flags — determines the routing: Transparency, PreCheck, or HRAI.

It's not a checklist. It's a signal map.

New here? I built the AI Compliance Engine — a 12-question intake that generates a personalised 26-page EU AI Act compliance report in minutes. DM "PRECHECK" to try the intake.

DM me "PRECHECK" — I'll send you the intake link and a sample report so you can see how the scoring works against a real use case.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#RiskScoring](#) [#AnnexIII](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

9/16 — The 12 dimensions aren't a checklist. They're a signal map for where compliance risk actually lives in your specific use case.

Which of the 12 dimensions do you think is most often underestimated in your industry?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "What 12 Questions Are Actually Measuring"

S1: "What are 12 questions actually measuring?" — A fair challenge. Here's the honest answer. / Not boxes. Signal density.

S2: They're not measuring documents. / They're measuring how many indicators of genuine compliance risk are present in your specific use case.

S3: Dimensions 1–4: / Personal data. Special category data. Automated decision-making. Impact on user rights.

S4: Dimensions 5–8: / Life-situation decisions. Error consequences. Human oversight need. Data quality dependency.

S5: Dimensions 9–12: / Continuous monitoring need. Behaviour influence. Logging and auditability. Regulatory and sector risk.

S6: Each dimension is scored. The total (0–60) + critical flags = routing: Transparency, PreCheck, or HRAI.

S7: Not a checklist. A signal map. DM "PRECHECK" to see your use case scored.

POST 10/16 — THE METHODOLOGY — Same AI tool, score 8 vs. score 41

Kedd | 3. hét: THE METHODOLOGY

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

Two companies. Almost identical AI tools. One scored 8/60. The other scored 41/60. Here's why — and what it meant for what each one had to do next.

Both organisations had built an AI tool that did, on the surface, the same thing: it analysed incoming customer service requests and routed them to the appropriate team.

COMPANY A — score 8/60 → Transparency

The AI only routed internal ticket categories, not customer-facing decisions. Human agents reviewed all routings before acting. No personal data was processed — only anonymised ticket content. No Annex III trigger.

Route: Transparency. An AI disclosure notice and a basic logging process. Two weeks of work.

COMPANY B — score 41/60 → PreCheck

The AI routed customer service requests that included account decisions — credit limit changes, service suspensions. Routing sometimes triggered automated actions without a human review step. Personal data was processed. Financial services sector flag activated.

Route: PreCheck. Oversight documentation, Annex III clarification, GDPR processing note, and a routing decision on whether deeper HRAI assessment was needed.

Same surface function. Fundamentally different risk profile.

The score is not a judgment. It's a map. It shows where the risk signals are concentrated — and therefore where the compliance work needs to go.

New here? The AI Compliance Engine scores AI use cases from 0 to 60 across 12 dimensions, then routes to the right compliance tier. DM "PRECHECK" to see where your use case would land.

DM me "PRECHECK" and I'll send you the intake link. Three minutes to see where your use case scores.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#RiskScoring](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

10/16 — The same surface function can produce a score of 8 or 41 depending on what happens underneath. The routing step finds the difference.

What do you think is the most commonly missed signal in AI risk assessments?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "Same AI Tool. Score 8 vs. Score 41. Here's Why."

S1: Two companies. Almost identical AI tools. Score: 8/60 vs. 41/60. / Here's why — and what it changed.

S2: On the surface — the same: / Both tools analysed incoming customer service requests and routed them to the appropriate team.

S3: Company A — score 8/60 — Transparency: / Internal routing only. Human review before action. Anonymised data. No Annex III trigger.

S4: Company A result: / Disclosure notice + basic logging. Two weeks of work.

S5: Company B — score 41/60 — PreCheck: / Customer-facing account decisions (credit, suspensions). Automated triggers. Personal data. Financial services flag.

S6: Company B result: / Oversight documentation. Annex III clarification. GDPR note. Routing decision on HRAI.

S7: Same surface. Different risk profile. The score is not a judgment — it's a map.

POST 11/16 — THE METHODOLOGY — Three companies, three completely different paths

Szerda | 3. hét: THE METHODOLOGY

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

A 12-person HR tech startup. A 200-person logistics firm. A 450-person healthcare platform. Three AI systems. Three completely different compliance paths. Here's what separated them.

TIER 1 — TRANSPARENCY

Bright Loop is a 12-person HR tech startup. Their AI generates personalised onboarding checklists for new hires based on role and department. No personal data beyond role title. No decisions — a human manager reviews and adjusts every checklist before it's sent.

Score: 6/60. Route: Transparency. Required: an AI disclosure in the product UI, a brief data processing note, a logging process. Total work: approximately two weeks, manageable internally.

TIER 2 — PRECHECK

Meridian Freight is a 200-person logistics company. Their AI recommends delivery route priorities based on traffic patterns and package urgency. Human dispatchers review and override routinely. Some driver location data is processed in the background.

Score: 28/60. Route: PreCheck. Required: structured use-case documentation, human oversight protocol, a GDPR processing review (the driver data point), an Annex III pre-screening for the employment dimension, and a routing decision on whether further assessment is needed.

TIER 3 — HRAI

CareLink is a 450-person digital health platform. Their AI recommends care pathway adjustments for patients with chronic conditions. Clinical staff review recommendations, but the AI output directly influences treatment schedules. Health data is processed. The healthcare sector Annex III flag is activated.

Score: 52/60. Route: HRAI. Required: full high-risk AI system preparation — conformity assessment pathway, quality management system elements, human oversight documentation, risk management system, post-market monitoring plan.

Three different routes. Three proportional responses. The routing is not about the technology — it's about what the technology does, to whom, and with what oversight in place.

New here? I built the AI Compliance Engine — automated EU AI Act compliance reports in minutes. DM "PRECHECK" to see where your use case would land.

Which of these three scenarios is closest to your AI use case? Drop it in the comments — and DM "PRECHECK" if you want to see where your specific tool would score.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#RiskBasedApproach](#) [#HighRiskAI](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

11/16 — Transparency, PreCheck, HRAI — three proportional responses to three genuinely different risk profiles. Proportionality is the design principle, not a workaround.

Which tier do you think most of your organisation's AI tools would fall into?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "3 Companies. 3 AI Systems. 3 Completely Different Paths."

S1: 3 companies. 3 AI systems. 3 completely different compliance paths. / Here's what separated them.

S2: Bright Loop — 12 people. Score: 6/60. / HR tech. AI generates onboarding checklists. Human reviews every output. No personal data beyond role title. Route: Transparency.

S3: Bright Loop result: / AI disclosure in UI. Data processing note. Logging process. ~2 weeks. Managed internally.

S4: Meridian Freight — 200 people. Score: 28/60. / Delivery route recommendations. Human dispatchers override. Driver location data processed. Route: PreCheck.

S5: Meridian result: / Use-case documentation. Oversight protocol. GDPR review. Annex III pre-screening.

S6: CareLink — 450 people. Score: 52/60. / Care pathway recommendations. Health data. Clinical impact. Annex III healthcare flag. Route: HRAI.

S7: Three routes. Three proportional responses. Routing is about what the AI does, to whom, and with what oversight.

POST 12/16 — THE METHODOLOGY — Same 26 pages, three different workflows

Csütörtök | 3. hét: THE METHODOLOGY

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

The CEO made a decision. The project manager assigned tasks. The lawyer found her references. Same 26 pages. Same morning. Here's how that's possible.

When the AI Compliance Engine delivers a report, it goes to three people at once.

Here's what happened at one company the morning after their report arrived.

THE CEO opened the executive section. She had twelve minutes before her next call. She read the quick-view summary — three sentences on what the routing result means, three questions that need a decision, one recommended next step. She approved the pathway and delegated the operational tasks before her call started.

THE HEAD OF COMPLIANCE opened the operational section. He needed to know what to build. He found an evidence pack with eight specific deliverables — each with a description, a responsible role, a priority level, and an indicative deadline. By the end of the morning, five of the eight tasks had been assigned.

THE LEGAL ADVISER opened the appendix. She needed to know what regulatory basis was being applied, where the Annex III pre-screening conclusions came from, and which GDPR articles were in scope. She found the references, cross-checked two points, and had what she needed for the legal file in under thirty minutes.

Same document. Same morning. Three different workflows activated.

This is what "immediately delegable" actually means. Not "thorough enough that someone could figure it out." Built in a way that each stakeholder finds their section, their tasks, and their references without having to translate the whole document first.

New here? The AI Compliance Engine generates a personalised 26-page EU AI Act compliance report from a 3-minute intake. DM "PRECHECK" to see a sample.

DM me "PRECHECK" — I'll send a sample report. See for yourself how the three sections read for three different people.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#DecisionSupport](#) [#AIGovernance](#)

ELSŐ KOMMENT — a poszt közzététele után töltsse fel külön

12/16 — The three-audience design isn't a formatting choice. It's the reason the report gets acted on instead of filed.

Which audience in your org most often ends up without a clear action from compliance outputs — the CEO, the ops team, or legal?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "Same 26 Pages. Three People. Three Different Workflows."

S1: The CEO made a decision. The PM assigned tasks. The lawyer found her references. Same 26 pages. Same morning. / Here's how.

S2: The CEO — 12 minutes: / Executive section. Quick-view summary. Three decisions. One recommended next step. Pathway approved.

S3: The Head of Compliance — same morning: / Operational section. Eight deliverables. Responsible roles. Priorities. Deadlines. Five tasks assigned.

S4: The Legal Adviser — under 30 minutes: / Legal appendix. Regulatory basis. Annex III pre-screening sources. GDPR articles. Legal file ready.

S5: Same document. Same morning. Three different workflows activated.

S6: "Immediately delegable" doesn't mean thorough enough to figure out. It means each person finds their section without translating the whole document.

S7: Three sections. Three audiences. One assessment. DM "PRECHECK" to see all three side by side.

POST 13/16 — THE PRODUCT — What to do tomorrow morning

Hétfő | 4. hét: THE PRODUCT

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

Most compliance plans tell you where to end up. This one tells you what to do tomorrow morning.

A compliance manager once told me something that stuck.

"I always know what needs to be done eventually. Annex III assessment, oversight documentation, DPIA review — I know the list. What I never know is what to do tomorrow morning."

That gap — between knowing the destination and knowing the next step — is where most AI Act compliance programmes stall. The work feels so large that nothing small feels worth doing. So nothing gets done.

The 7-day implementation plan in every AI Compliance Engine report is designed to close that gap.

Here's what it looks like:

Day 1 — Use case definition. Document the intended purpose and actual purpose. Assign owners: Business, IT, Compliance.

Day 2 — Scope and exclusions. Define the system boundary. First version of the change management approach.

Day 3 — Automation and human control. Document whether the AI recommends, supports, or acts automatically. Map the human oversight and escalation points.

Day 4 — Data processing. Map data sources, personal data, access rights. Review logging and retention logic.

Day 5 — Annex III pre-screening. Review which categories apply, collect the "needs clarification" points.

Day 6 — GDPR / DPIA trigger check. Review automated decision points, profiling, and special category data.

Day 7 — Routing decision. Management decision: stay at PreCheck level, or open HRAI / DPIA / legal assessment? Document next steps and assign owners.

By day 3, the conversation changes. By day 7, leadership has something they can approve, redirect, or escalate — not just read.

This is what the report includes. Along with the executive pack, the evidence checklist, the Annex III pre-screening, and the legal reference appendix.

First time here? The AI Compliance Engine is a 3-minute, automated EU AI Act compliance assessment. Score 0–60. 26-page personalised report. DM "PRECHECK" to try it.

DM me "PRECHECK" or go to the intake directly — three minutes to get your score, your route, and your 7-day plan.

[#AIAct](#) [#EUIAIAct](#) [#AICompliance](#) [#AIActReadiness](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltse fel külön

13/16 — The 7-day plan solves the "I know what to do eventually, but not tomorrow morning" problem. That's the gap where most compliance programmes stall.

What would unblock your team most: knowing what to do tomorrow, or knowing what the end state should look like?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "Most Compliance Plans Tell You Where to End Up. This One Tells You What to Do Tomorrow."

S1: Most compliance plans tell you where to end up. This one tells you what to do tomorrow morning. / The 7-day implementation plan — inside every report.

S2: The gap it closes: / "I always know what needs to be done eventually. What I never know is what to do tomorrow morning."

S3: Days 1–3: / Day 1: Use case definition. / Day 2: Scope and exclusions. / Day 3: Automation and human control mapped.

S4: Days 4–6: / Day 4: Data processing. / Day 5: Annex III pre-screening. / Day 6: GDPR / DPIA trigger check.

S5: Day 7: Routing decision. / Management decides: stay at PreCheck, or open HRAI / DPIA / legal assessment?

S6: By Day 3 — conversation changes. By Day 7 — leadership has something to approve, redirect, or escalate.

S7: 3-minute intake. 7-day plan. 26-page report. DM "PRECHECK" to get yours.

POST 14/16 — THE PRODUCT — Under €200 and 3 minutes vs. €18,000 and 6 weeks

Kedd | 4. hét: THE PRODUCT

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

Company A spent €18,000 and six weeks. Company B spent under €200 and three minutes. Here's what each had at the end.

Two companies. Same problem. Roughly the same AI tool — a customer-facing recommendation engine, mid-size organisation, real EU AI Act exposure.

COMPANY A called a well-regarded compliance consultancy. Proposal accepted, engagement kicked off. Six weeks of discovery, assessment, documentation, and review cycles. €18,000 invoice. Deliverable: a 44-page report.

Week 7: the report arrived. It was thorough. The CEO couldn't identify a clear decision. The Head of Product didn't know which tasks were hers. The legal adviser had to write a separate memo to extract what she needed. Nobody knew what to do first.

COMPANY B completed the AI Compliance Engine intake. Twelve questions. Three minutes. Under €200 (Transparency route — baseline obligations only, low risk score).

Within the hour, they had:— A 26-page personalised PDF with the company name, use case, and score— An executive section with three decisions and one recommendation— An evidence pack with eight tasks, owners, and deadlines— A 7-day implementation plan— A legal appendix with regulatory references

Week 1: the CEO approved the pathway. Week 2: five of eight tasks assigned and in progress. Week 3: first evidence items complete.

Same problem. Same risk level. One cost €18,000 and produced a filing. One cost under €200 and produced a project.

I'm not saying consultants aren't valuable — for complex, high-risk, multi-system assessments, they are. But for the majority of AI Act compliance questions that mid-market organisations actually face, the first question is a routing question. Not a six-week engagement.

A score of 0–60 answers that question in three minutes.

New here? The AI Compliance Engine: 12 questions, 3 minutes, 26-page automated EU AI Act compliance report. This is what that means vs. the consulting alternative.

Go to the intake or DM me "PRECHECK." Three minutes. See your score. See your route. Decide if you need more.

[#AIAct](#) [#EUIAct](#) [#ACompliance](#) [#RegTech](#) [#SMECompliance](#)

ELSŐ KOMMENT — a poszt közzététele után töltsd fel külön

Under €200 vs. €18,000. 3 minutes vs. 6 weeks. Same problem. Very different outcomes. The routing score is the difference.

Has your org over-invested in compliance work that wasn't proportional to the actual risk level?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "Under €200 and 3 Minutes vs. €18,000 and 6 Weeks"

S1: €18,000. 6 weeks. vs. under €200. 3 minutes. Same problem. Here's what each produced. / The most important comparison in AI Act compliance right now.

S2: Company A — the consulting route: / €18,000. 6 weeks. 44-page report. Week 7: nobody knew what to do first.

S3: Company A — week 7: / CEO: no clear decision. / Head of Product: no clear tasks. / Legal: had to write a separate memo.

S4: Company B — AI Compliance Engine: / 12 questions. 3 minutes. Under €200 (Transparency route).

S5: Company B — within one hour: / Personalised 26-page PDF. 3 decisions. 8 tasks with owners. 7-day plan. Legal appendix.

S6: Company B — execution: / Week 1: CEO approved. Week 2: 5/8 tasks assigned. Week 3: first evidence items complete.

S7: One cost €18,000 and produced a filing. One cost under €200 and produced a project.

POST 15/16 — THE PRODUCT — Exactly what's inside a PreCheck report

Szerda | 4. hét: THE PRODUCT

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

Here's exactly what a PreCheck AI Act compliance report looks like. All 26 pages. Nothing held back.

Before someone pays for anything, they should know exactly what they're getting. So here's the full structure of a PreCheck-level AI Compliance Engine report.

SECTION 1 — EXECUTIVE PACKAGE (pages 1–11)

Executive Quick View — one page. The routing result in three sentences, three decisions that need management input, one recommended next step. Readable in under five minutes.

Score Table — all 12 dimensions with submitted response, score contribution, and signal level. Transparent, auditable, reviewable.

Annex III Pre-Screening — which of the eight Annex III areas are potentially in scope, which are not impacted, and where legal clarification is recommended.

Recommended Next Steps — a prioritised action list (P1, P2, P3) with management-level explanations for why each step matters.

Management Summary — one page. Why this was a good decision, what this document enables, and what it explicitly does not claim.

SECTION 2 — OPERATIONAL IMPLEMENTATION (pages 12–16)

Evidence Pack — eight to twelve specific deliverables, each with: what to create, the responsible role, priority level, and target deadline. A mini-project plan — assign, manage, close.

7-Day Implementation Plan — daily focus areas with specific tasks and expected deliverables. By Day 7, the routing decision is ready.

PreCheck Ready State Checklist — ten conditions that define when the use case is in a controlled, decision-ready state.

SECTION 3 — LEGAL BACKGROUND (pages 17–26)

Glossary — eleven key terms in plain language.

Legal Toolkit — DPIA quick check, ROPA minimum fields, transparency checklist, automated decision safeguards, AI Act Art. 50 requirements, GDPR/AI intersection note.

Legal References — EU AI Act Articles 6, 9, 13, 50; Annex III; GDPR Articles 22, 30, 35; EDPB Opinion 28/2024.

Disclaimer — what the report is and is not. Explicit and consistent.

That's 26 pages. For a PreCheck.

Transparency-level reports are somewhat shorter. HRAI-level reports have a substantially more detailed operational section. Same structure. Proportional depth.

New here? The AI Compliance Engine generates a personalised 26-page EU AI Act compliance report from a 3-minute intake. This post shows exactly what's inside — every section, every page.

DM me "PRECHECK" to start the intake, or reply here and I'll send the sample report directly.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#AIGovernance](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után tölts fel külön

15/16 — 26 pages, three sections, three audiences. The score determines the depth. The structure stays the same across all tiers.

Which section would you go to first — executive, operational, or legal?

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "Here's Exactly What's Inside a PreCheck AI Act Compliance Report"

S1: Here's exactly what's inside a PreCheck AI Act compliance report. All 26 pages. Nothing held back. / Before you pay for anything — see what you're getting.

S2: Section 1: Executive Package (pp. 1–11): / Quick View (routing + 3 decisions). Score Table (12 dimensions). Annex III Pre-Screening. Recommended Next Steps. Management Summary.

S3: Section 2: Operational Implementation (pp. 12–16): / Evidence Pack (8–12 deliverables, owners, deadlines). 7-Day Plan. Ready State Checklist.

S4: Section 3: Legal Background (pp. 17–26): / Glossary (11 terms). Legal Toolkit (DPIA, ROPA, Art. 50, GDPR). References. Disclaimer.

S5: Three sections. Three audiences. One assessment. The CEO reads 3 pages. The PM reads 5. The lawyer reads 10.

S6: Transparency reports: shorter. HRAI reports: deeper operational section. Same structure. Proportional depth.

S7: DM "PRECHECK" to start the intake. The sample shows the full structure — before you decide.

POST 16/16 — CLOSING — The window is open. Here's what to do with it.

Csütörtök | 4. hét: CLOSING

POSZT SZÖVEGE — másolja be közvetlenül LinkedInre

The EU AI Act 2026 deadline is real. The market is in the "know they need to act, don't know how" phase. This window closes.

Sixteen posts. One thread.

Every story in this series — Laura's delayed pilot, Marcus's three-week hold, the €18,000 report nobody could action, Sandra's closed laptop after the enterprise demo — is a version of the same problem.

Organisations know the EU AI Act is real. They know their deadline is 2026. They know they have AI systems in production or approaching production that need some form of compliance attention.

What they don't have is a clear, proportional, affordable starting point.

That starting point is what the AI Compliance Engine is built to provide.

Three minutes to complete the intake. A personalised risk score from 0 to 60. A routing classification — Transparency, PreCheck, or HRAI. A 26-page report — executive decision pack, operational task list, legal reference appendix. Automatically generated. Immediately delegable.

Pricing is proportional to your risk level — determined automatically after the 3-minute intake.

This is the market phase where early clarity compounds. Organisations that establish their AI Act baseline now — before the 2026 enforcement pressure builds — have months to implement proportional responses. Organisations that wait will be doing the same work under pressure, with fewer options.

The window is open. It won't be for much longer.

Not legal advice. Not certification. Not an audit.

Decision support — the kind that lets AI projects move, keeps governance defensible, and costs a fraction of traditional consulting.

DM me "PRECHECK" to start your intake, or reply here and I'll send the sample report. The 12 questions take three minutes. The score tells you everything that comes next.

[#AIAct](#) [#EUAIAct](#) [#AICompliance](#) [#AIActReadiness](#) [#DecisionSupport](#)

ELSŐ KOMMENT — a poszt közzététele után töltsse fel külön

16/16 — The AI Act Readiness Series is complete. 16 posts. One through-line: the first question determines the route. DM me "PRECHECK" to start your intake, or visit the link in my bio.

If one post in this series changed how you're thinking about your AI Act approach — I'd genuinely like to know which one.

CAROUSEL BRIEF — designer / AI képgenerátor briefing

Carousel cím: "The Window Is Open. Here's What to Do With It."

S1: The EU AI Act 2026 deadline is real. The market is waking up. This window closes. / 16 posts. One conclusion.

S2: Every story in this series was the same problem: / No clear, proportional, affordable starting point.

S3: The AI Compliance Engine: / 3 minutes. Score 0–60. Three tiers. 26-page report. Automatically generated.

S4: Three sections. Three audiences: / CEO: decision pack. / Operations: task list. / Legal: reference appendix.

S5: Pricing proportional to your risk level — determined automatically after the intake.

S6: Early clarity compounds: / Act now → months to implement proportionally. / Wait → same work, under pressure, fewer options.

S7: Not legal advice. Not certification. Decision support — the kind that lets AI projects ship. / DM "PRECHECK" to start.
